

SAFETY LIMIT SWITCH SLS

Features:

- Fully compatible with LINAK systems
- Sturdy, grey plastic housing
- To be mounted on the cable between the control box and the actuator
- Small dimensions for easy and inconspicuous installation
- Rated at 5A (24V DC)
- Protection class: IP 66 or IP 66 washable (all ultrasonic welded)
- Colour: grey only
- Straight cable with Jack-plug

Options:

- Available with coiled cable
- Available with DIN cable

LINAK has designed a switch that can be mounted in connection with the 24V DC actuators: LA12, LA22, LA28, LA28S, LA31, LA32 or LA34 and a control box on e.g. a bed frame.

The SLS can be a safety feature, that cuts off the current to the actuator. The SLS is available with 1 or 2 switches (activated at the same time). It can be placed to prevent an unintentional positioning of the various frame segments in relation to each other or simply as an external limit switch to protect the frame against the full thrust of the actuator in end position. The actuator stops immediately when the button is pressed.

It is necessary to specify whether the actuator is moving out or in when the switch is activated and stops the actuator.

Furthermore the SLS can be used as an external signal unit that e.g. gives a signal to a control box. This signal can limit or interrupt the functions on e.g. a bed.

SLS

Ordering example:

SLS 4 0 0 + 0 100 0 100

* Also possible to order other lengths (min. Length 100mm.)
Double switch must be ordered as a special article.

Dimensions:

The ultrasonic welded SLS is fully compatible with the screwed SLS. All outer dimensions as well as the activation point are unchanged.

Cable length:

LINAK A/S
